

Data source: <https://www.kaggle.com/datasets/sujalsuthar/food-delivery-order-history-data?resource=download>

This dataset contains 21,321 food order records from various restaurants, capturing crucial details about customer preferences, order trends, pricing, and delivery performance. It includes 6 unique imaginary restaurants, such as Swaad, Aura Pizzas, Dilli Burger Adda, Tandoori Junction, The Chicken Junction, and Masala Junction.

The dataset provides a comprehensive view of food delivery operations, making it highly valuable for data analysis, predictive modeling, and machine learning applications.

Key attributes in this dataset include ;

RESTAURANT DETAILS (restaurant name, subzone, city),

ORDER INFORMATION (order ID, timestamps, order status, delivery time, distance, number of items),

PRICING BREAKDOWN (bill subtotal, packaging charges, total cost, discounts), and

CUSTOMER FEEDBACK (ratings, reviews, order cancellations).

It also tracks key delivery insights such as rider wait time, preparation duration, and distance traveled, which can be useful for logistics optimization and demand forecasting.

This dataset can be leveraged for predicting delivery times, analyzing customer behavior, identifying topperforming restaurants, and optimizing pricing strategies.

It is particularly useful for food delivery platforms, restaurant managers, and data scientists looking to improve delivery efficiency and customer satisfaction. With rich historical data, this dataset can also be used for building recommendation systems, identifying peak ordering times, and enhancing user experience in food delivery applications.

DATA FIELD DESCRIPTION

Restaurant ID - Unique ID assigned to each restaurant

Restaurant name- Name of the restaurant (e.g., Swaad, Aura Pizzas, Dilli Burger Adda)

Subzone- Location subzone of the restaurant

City-City where the restaurant is located

Order ID-Unique identifier for each order

Order Placed At-Timestamp when the order was placed

Order Status-Status of the order (Delivered, Canceled, Rejected, In Progress)

Delivery-Mode of delivery (Zomato Delivery, Self Pickup, etc.)

Distance-Distance between restaurant and customer (e.g., <1km, 2km, 5km)

Items in order-List of food items ordered

Instructions-Special instructions from the customer

Discount construct-Discounts

Bill subtotal-Total cost before discounts

Packaging charges-Additional packaging fees

Restaurant discount (Promo)-Discounts provided by restaurant promos

Restaurant discount (Flat offs, Freebies & others)-Additional discounts

Gold discount-Zomato Gold membership discount

Brand pack discount-Discount for branded packaging

Total-Final bill amount after all discounts

Rating-Customer rating (1 to 5)

Review-Text reviews given by customers

Cancellation / Rejection reason-Reason for order cancellation or rejection

Restaurant compensation (Cancellation)-Refund amount for canceled orders

Restaurant penalty (Rejection)-Penalty applied for rejected orders

KPT duration (minutes)-Kitchen Preparation Time (order preparation duration)

Rider wait time (minutes)-Time the rider had to wait before picking up the order

Order Ready Marked-Whether the order was marked ready correctly

Customer complaint tag--Any complaints registered by customers

Customer ID-Hashed identifier for customer privacy
